

Outdoor Domestic Cooling

feel the change...

Transform your outdoor areas into a cool and comfortable haven during the hot summer months by adding an efficient and effective cooling system. This will assist you to maximise your relaxation time and also provide a cool and pleasurable environment when entertaining your guests. To truly relax and unwind in summer it is important to be comfortable when you are outside; CoolMist Systems Australia is here to make that possible.

Using one of our misting systems can reduce air temperature by up to 10°C or more and deter flies from the area whilst creating a special ambience. These benefits are not only cost effective and environmentally friendly but are the key to enjoying those glorious summer months. We can custom design your system to meet your specific requirements and will professionally install your system, or you can self install.

All systems require only water and power to provide a viable solution to your problem. Compared to other options on the market, CoolMist provides the best value for your investment.
